Northstar Components Ltd. — Fictional Annual Report

Training sample only • Fiscal year ended 31 March 2026

Company overview

Northstar Components Ltd. is a fictional manufacturer of industrial components. It sells to customers in the automotive, energy, and industrial equipment sectors. All company names, figures, events, and statements in this document are invented for software testing.

Financial summary

For fiscal year 2026, reported revenue was ■1,200 crore, compared with ■1,000 crore in fiscal year 2025. Operating expenses increased from ■720 crore to ■900 crore. Operating profit was ■180 crore in fiscal year 2026 and ■170 crore in fiscal year 2025. These numbers are fictional and have not been audited.

Management commentary

Management attributes revenue growth to increased demand from energy-sector customers and the launch of two new component lines. Management also notes that higher raw-material prices and freight costs increased operating expenses during the year.

Risk factors

The fictional company identifies three principal risks: (1) dependence on a small number of large customers, (2) volatility in steel and electronic component prices, and (3) delays in commissioning a new production facility. A delay of more than six months could defer planned capacity additions.

Liquidity and capital expenditure

The company spent ■95 crore on capital expenditure in fiscal year 2026, primarily for factory automation and a new production line. Management expects additional spending in fiscal year 2027, but this expectation depends on project approvals and equipment delivery schedules.

Outlook

Management expects demand from energy and industrial customers to remain supportive, but states that forecasts are subject to market conditions, input costs, customer demand, and project execution. This statement is a fictional management outlook, not a verified forecast.
